The screenshot displays the Apache Airflow web interface. At the top, there's a navigation bar with links for DAGs, Cluster Activity, Datasets, Security, Browse, Admin, and Docs. The top right corner shows the time as 23:22 UTC and a user icon. Below the navigation bar, there's a status bar with various task states: deferred, failed, queued, removed, restarting, running, scheduled, shutdown, skipped, success, up_for_reschedule, up_for_retry, upstream_failed, and no_status.

The main content area shows a DAG named 'olympic_medal_dag' running on 2024-12-09 at 23:20:02 UTC. The DAG is displayed in a graph view, showing the flow of tasks. The tasks are represented by colored squares: green for success, red for failure, and pink for skipped. The tasks are: create_table (success), choose_medal_type (success), count_silver (skipped), count_gold (success), count_bronze (skipped), wait_for_data (success), and check_new_record (success).

On the left side, there's a timeline view showing the duration of the DAG execution. The timeline starts at 00:09:34 and ends at 00:09:51. The tasks are represented by colored squares: green for success, red for failure, and pink for skipped.

The task graph on the right shows the DAG's structure. The tasks are connected by arrows indicating the flow of execution. The tasks are: create_table (success), choose_medal_type (success), count_silver (skipped), count_gold (success), count_bronze (skipped), wait_for_data (success), and check_new_record (success).
